

Sodium Bicarbonate: Residual Solvents Statement

Genesis affirms that our Sodium Bicarbonate (all grades) complies with the current USP/NF General Chapter <467> residual solvents guidelines. Class 1, Class 2, or Class 3 solvents listed in the International Committee of Harmonization (ICH) are not a part of our manufacturing process.

The Genesis Alkali QC lab analyzes a representative set of sodium bicarbonate samples to the current USP/NF general chapter <467> residual solvents guidelines. Over the last year of testing, no solvents were detected above the specification limits.

Read the product Safety Data Sheet (SDS) prior to using the chemical.
