

Sodium Bicarbonate: Bagged Product Lot Numbering System

Each container of sodium bicarbonate receives a lot number as it is filled. For bags, regardless of size, the lot code is located on at least one side of the bag. The format of the lot code is:

YY-Julian date

Example: **21-037**, packaged on the 37th day of 2021 (February 6, 2021)

If the product grade is not pre-printed on the bags, the lot code will also include the grade number; **21-037-#1**, for USP Grade No.1.

The container and/or paperwork may have a batch number printed on it. This is an internal Genesis Alkali number used in production and marketing tracking. There is no customer usable information built into it. The Certificate of Analysis (COA) may use the term 'Container Identification' for the corresponding package/product Lot #.

Read the product Safety Data Sheet (SDS) prior to using the chemical.
